**The

of parenteral nutrition

The pre-and post-operative patient may require calories in the form of carbohydrates. These are best provided with minimal fluid volume. Just one litre of Sorbitol 30% 'Egic' provides your patient with 1200 calories, whereas three litres of the conventional dextrose 10% solution would be needed. Also with Sorbitol 30%—the risk of venous thrombosis is dramatically reduced and there is no danger of hyperglycaemia, or reactional hypoglycaemia, it has superior antiketogenic properties over fructose and is not insulin dependent. Sorbitol 30% 'Egic'—today's intravenous carbohydrate provider.

Sorbitol 30% 'Egic' Bottles of 500ml. Complete with giving set.

Trophysan. Wherever oral protein intake is insufficient Trophysan provides more readily assimilable free-amino nitrogen as pure crystalline amino acids in balanced proportions plus Sorbitol, Vitamins and Minerals. Trophysan often produces an earlier return to normal oral feeding and speeds recovery.

"In clinical practice Sorbitol has proved to be almost fully retained in the body and can replace intravenous dextrose as a carbohydrate source. Although like dextrose it yields only 4 cal. per gramme of carbohydrate, it can be safely administered as a 30 per cent solution containing 1200 cal. per litre. In a grossly infected surgical patient requiring intravenous feeding for 3 months, Sorbitol was used as the main source of calories without alteration in the patient's nitrogen balance."¹

Maxolon

a powerful anti-emetic... which also restores gastric motility

Maxolon is of proven value in nausea and vomiting...

Maxolon acts centrally on the chemoreceptor trigger zone, and also acts locally on the afferent nerves of the pylorus and duodenum leading to the vomiting centre. Maxolon is remarkably effective in the treatment of nausea and vomiting from a wide range of gastric disorders. In a clinical trial (1) Maxolon achieved an 80% reduction score in nausea and 87% in vomiting.

...Maxolon also restores gastric motility

This makes it unique among products used in the alimentary tract. Spasm where present is relieved and stasis gives way

to normal peristalsis. This action is of great importance in the treatment of nausea and vomiting but also leads to a consideration of further therapeutic applications. Among these are its known value in the treatment of post vagotomy symptoms, post operative gastric hypotonia, duodenal intubation and diagnostic radiology.

Maxolon has a good safety record. It does not sedate the patient, nor affect gastric or salivary secretion.

Maxolon is a unique compound—with a well proven clinical record.

Are you finding in practice how much more there is to Maxolon?

These articles are original works, clinical, radiological, biological and anatomy-pathological papers (with illustrations and bibliography).

The articles are written in French and followed by a summary in French and English.

The Archives also publishes summaries of the Proceedings of the Societies of which they are the

official organ, the texts of conferences or communications which are presented to them, Proceedings of Congresses or Colloquia, book and journal reviews.

GASTRIC ULCER PATIENTS STILL FILLING YOUR BEDS?

The present study suggests that a rise in the percentage of ambulant patients may result in slightly less rapid ulcer healing than can be achieved by the addition of inpatient care, but the difference is not statistically significant. **For practical purposes conventional inpatient care of a gastric ulcer carries no ultimate advantage over ambulant therapy with carbenoxolone.**

A second conclusion is that if a gastric ulcer has failed to heal after three months of ambulant therapy with carbenoxolone it is very unlikely to heal subsequently with inpatient care.

GASTROENTEROLOGY:

The monthly seminar

You may object to our calling a medical journal a seminar. But consider it this way: each month, you share in the results of research and clinical studies of your confreres. When the after-hours free you at the end of the day's appointments, consult GASTROENTEROLOGY. You'll find:

- 1.) **Selected summaries.** Abstracts of relevant new work, with a brief expert critique.
- 2.) **Original papers.** Studies of the liver, alimentary tract, pancreas and biliary tract.
- 3.) **Case Studies.** Dealing with clinical research.

Too, there'll be editorials, symposium reports, and a "special comments" section for readers to present their views of papers that have appeared in recent issues—your chance to participate in the "monthly seminar" when you so desire.

TODAY'S DRUGS

New 1970 Edition

The problem facing the prescribing doctor today is choice. Catalogues of drugs—no matter how detailed—are of little help unless accompanied by advice on which drug to give for what condition. So this new edition of "Today's Drugs" not only gives a full account of the drugs but also includes clear accounts of the management of common conditions such as urinary infections and epilepsy.

The new edition differs from the earlier one in other ways. It deals with only three subjects— infections, vitamin deficiencies and anaemias, and disorders of the nervous system. Further volumes will be published at intervals of about a year, and by the time the whole field of therapeutics has been covered this first volume will have become obsolete and due for replacement. In order to further emphasize the ephemeral nature of books on therapeutics—and to cut costs—the book is a paperback.
