"It is concluded that maintenance treatment of ulcerative colitis with sulphasalazine (salazopyrin) should be continued indefinitely unless contraindicated by side effects."

The results of the above controlled trial carried out at the Nuffield Department of Clinical Medicine, Radcliffe Infirmary, Oxford are all the more welcome as earlier trials of cortisone and prednisone at standard dosages have shown them to be ineffective in reducing the number of recurrences of ulcerative colitis.

"Fortunately, Sulphasalazine tablets, 0.5 grams 4 times a day will prevent relapses in the majority of patients with colitis, and only a few patients cannot tolerate this relatively small dose, which can be continued indefinitely since we do not know when, if ever, it can be safely stopped."

Salazopyrin (sulphasazine) is available as the plain 0.5g. tablet, 0.5g. EN-tab and as an 0.5g. suppository.

"The patients who received dummy tablets had more than four times the relapse rate of those receiving sulphasalazine",¹ (Salazopyrin).

Endoscopy confirms that De-Nol heals ulcers

Double-blind clinical trials, involving endoscopic diagnosis, follow-up and assessment, have shown De-Nol to heal up to 90% of gastric and duodenal ulcers, with safety; no serious side-effects being reported.

De-Nol

* heals gastric and duodenal ulcers
* early relief of pain
* is free from serious side-effects

"The combination of lack of side-effects in addition to promotion of ulcer healing suggests that (De-Nol) has a clinical role in the management of the ambulant patient with duodenal ulcer." GUT 1974 15 189-193.

"The degree of healing with (De-Nol) is comparable to, or better than that achieved by the most extensively used ulcer-healing agent, carbenoxolone sodium."

Pyser Limited are pleased to introduce the Fujinon range of flexible endoscopes.

In designing this range, Fuji worked in co-operation with practising Endoscopists throughout the world. One of the most important features resulting from this is that the diameter of the flexible section has been considerably reduced without sacrificing optical quality or operating performance.

Another important feature is the sealed image bundle. This prevents fluid leaking into the optical fibres, thus avoiding time consuming, costly repairs which result from this type of problem.

Air, water and suction are controlled by electronic micro-switches for simple trouble-free operation, powered by the low cost light source.

A choice of 35mm still or 8mm cine automatic photography is available from the Fuji camera range, utilising the standard light source.

Fuji, one of the world's leading optical companies, have been producing fibre bundles for many years and the image quality of the Fujinon fibrescopes is unsurpassed.

Send for literature or a hospital demonstration — Fujinon fibrescopes have many other special features worth your attention — and are backed with after sales service by Pyser Ltd., a company with more than 50 years experience in the optical and scientific industry.

In haemorrhoids Fybogel complements topical therapy, by raising the level of natural fibre in the diet. Fybogel produces softer, well-formed stools. And that reduces straining—a principal cause of haemorrhoids. By complementing topical therapy Fybogel helps to provide a complete treatment for haemorrhoids.

THE END OF
THE RETENTION ENEMA
IN ULCERATIVE
COLITIS THERAPY

New

hydrocortisone acetate rectal foam

Retention enemas are messy
to administer, uncomfortable and
difficult for the patient to retain.

Now Colifoam offers a better
alternative in the treatment of ulcerative
colitis and proctitis. It presents effective
topical steroid therapy as an aerosol
foam. Colifoam has several practical
advantages: the patient can instil
a dose (only 5 ml.) in less than half a minute;
the foam is easily retained without
leakage problems, and the compact pack
with applicator is easy to carry around.
Yet Colifoam is no more expensive than a
retention enema.

And Colifoam works at least as well as the
older method. Trials have shown that with
Colifoam there is an improvement in mucosal
conditions throughout the colon, with
prompt relief of tenesmus.1,2 Extensive
trial use through hospitals has established
a high level of patient acceptance.

Alternative dosage regimen of Caved-S produces impressive results in chronic duodenal ulcer

Endoscopic examination proved chronic duodenal ulceration in 32 male patients, whose clinical histories ranged from 2 to 30 years.¹

ADEQUATE DOSAGE

2 Caved-S tablets 5 times daily for up to 24 weeks

"...the daily dose selected was the median of that advised in a series of patients treated with deglycyrrhizinized liquorice tablets who had failed to respond to other measures and had been referred for surgery..."¹

THOROUGH CHEWING OF THE TABLETS

mixed Caved-S with the saliva appears to play an important role.

"Saliva may have a role of its own or a synergistic action with constituent of the liquorice extract. Work in India (Malhotra et al, 1965) has suggested that eating foods which do not require chewing results in an increased incidence of duodenal ulceration and that saliva exerts a protective action in peptic ulceration (Malhotra 1967: Malhotra, 1967)."¹

SWALLOWING ON AN EMPTY STOMACH

allows the bolus of Caved-S and saliva to reach the prepyloric area of the stomach, where maximum demulcent effect and healing occur.

"The advice that the agent should be taken on an empty stomach in the ambulant patient could be crucial. Simple studies on patients presenting for barium-meal examination have shown that if a small sip of barium is taken while in an upright position when the stomach is empty the bolus of barium rapidly travels down the lesser curve of the stomach and comes to rest in the prepyloric region. This may effectively produce a 'positioned release' preparation, and the bolus of mixed saliva and deglycyrrhizinized liquorice would appear to be strategically placed to exert maximum demulcent or healing effect."¹

RESULTS

Endoscopic examination showed that Caved-S had healed the ulceration in ALL 32 patients and in most the mucosa appeared normal.
