ted by jejunal biopsies from CF children (Figure), an effect that was not significantly different from the response obtained in biopsies from a control group.

It therefore appears that the increased SCC across CF jejunum induced by A23187 is unlikely to result from the opening of basolateral K+ channels alone, but could represent a Cl- secretory response brought about by the elevation of intracellular Ca2+. Patch clamp analysis of the luminal membranes of enteroctyes affected by CF would provide a more definitive answer to this problem.

International Bilirubin Workshop
This workshop will be held in Trieste, Italy, 6–8 April, 1989. For inquiries and registration forms contact either of the Directors: Claudio Tiribelli, MD, Istituto Patologia Medica, University of Trieste, 34100 Trieste, Italy. Tel: (40)-776-4525, Fax: (40)-910-690; or J Donald Ostrow, MD, V.A. Lakeside Medical Center, 333 East Huron Street, Chicago, IL 60611, USA. Tel: (312)-943-6600, Ext 358, Fax: (312)-908-0365.

31st International Congress of Physiological Sciences
Will be held in Helsinki, Finland, on 7–14 July, 1989. Information from The Congress Secretariat, PO Box 722, SF-00101 Helsinki, Finland. (Telefax: 358-0-611 188).

Correction
24 h Intragastric acidity and plasma gastrin concentration . . . . Lanzon-Miller et al. October 1988 issue pp 1364-9. The fourth column in Figures 3 and 4 should be correctly labelled ranitidine 300 mg.
