Editor
British Medical Journal

Gut publishes original papers and reviews concerned with practice and clinical research in gastroenterology. The field includes the basic science, molecular biology, physiology and diseases of the alimentary tract, the liver and pancreas including epidemiological, medical, surgical, radiological or histopathological aspects. Case reports will only be accepted if of exceptional merit. Letters related to articles published in *Gut* or with topics of general professional interest are welcomed. Authors are encouraged to include the names and addresses of four experts whom the authors consider suitable to peer review their work.

COMMUNICATIONS Two copies of the manuscript and figures should be addressed to the Editor, *Gut*, BMA House, Tavistock Square, London WC1H 9JR, UK. Manuscripts should follow the Vancouver conventions (see *Br Med J* 1979; i: 532-5. *Gut* 1979; 20: 651-2). They should be in double-spaced typewriting on one side of the paper only. The title page should include the name of the author with initials or distinguishing first name only, and the name and address of the hospital or laboratory where the work was performed. The paper must include a precise summary of the work of less than 200 words. Excessive use of abbreviation is discouraged. A covering letter signed by all authors must state that the data have not been published elsewhere in whole or in part and that all authors agree to publication in *Gut*. Previous publication in abstract form must be disclosed in a footnote. Papers must not be published elsewhere without prior permission of the Editorial Committee.

ACKNOWLEDGEMENT OF MANUSCRIPTS Manuscripts will only be acknowledged if an addressed postcard is enclosed.

ILLUSTRATIONS *Photographs* Unmounted photographs on glossy paper should be provided. Illustrations should not be inserted in the text but marked on the back with the figure numbers, title of paper and name of author. All photographs, graphs, diagrams should be referred to as figures and should be numbered consecutively in the text in Arabic numerals. The legends for illustrations should be typed on a separate sheet.

ETHICS Ethical aspects will be considered in the assessment of papers (see the Medical Research Council's publications on the ethics of human experimentation, and the World Medical Association's code of ethics, known as the Declaration of Helsinki (see *Br Med J* 1964; 2: 177)).

SI UNITS All measurements except blood pressure are expressed in SI units. In tables, and illustrations values are given in SI units, but a conversion factor must be supplied. For general guidance on the International System of Units and some useful conversion factors, see *The SI for Health Professions* (WHO, 1977). **NB: Such conversion is the responsibility of the author.**

REFERENCES These follow the Vancouver system - that is, references numbered consecutively in the text and listed numerically with titles abbreviated in the style of *Index Medicus*, *Standard journal article* - (list all authors when six or less; when seven or more, list first three and add *et al*): James A, Joyce B, Harvey T. Effect of longterm cimetidine. *Gut* 1979; 20: 123-4. **NB: Accurate punctuation is essential.**

CORRECTIONS other than printers' errors may be charged to the author.

REPRINTS Reprints will be available on payment of the necessary costs; the number of reprints required should be sent to the Publishing Manager on the form provided with the proof.

NOTICE TO ADVERTISERS All applications for advertisement space and rates should be addressed to the Advertisement Manager, *Gut*, BMA House, Tavistock Square, London WC1H 9JR.

NOTICE TO SUBSCRIBERS *Gut* is published monthly. The annual subscription rates are £121 inland and £130 overseas (USA \$220.00). Reduced subscriptions of £52 available to trainees for one year. Orders should be sent to the Subscription Manager, *Gut*, BMA House, Tavistock Square, London WC1H 9JR. Orders can also be placed with any leading subscription agent or bookseller. (For the convenience of readers in the USA subscription orders, with or without payment, can be sent to: *British Medical Journal*, Box 560B, Kennebunkport, Maine 04046. All enquiries, however, must be addressed to the Publisher in London.) Subscribers may pay for their subscriptions by Access, Visa, or American Express by quoting on their order the credit or charge card preferred together with the appropriate personal account number and the expiry date of the card. All overseas copies of the journal are sent by accelerated surface post. If required, full air mail rates and enquiries for single copies already published should be addressed to the Publisher in London.

COPYRIGHT © 1991 *Gut*. This publication is copyright under the Berne Convention and the International Copyright Convention. All rights reserved. Apart from any relaxations permitted under national copyright laws, no part of the publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means without the prior permission of the copyright owners. Permission is not, however, required to copy abstracts of papers or articles on condition that a full reference to the source is shown. Multiple copying of the contents of the publication without permission is always illegal.

Second class postage paid, Rahway NJ. Postmaster: send address changes to: *Gut*, c/o Mercury Airfreight International Ltd Inc, 2323 Randolph Avenue, Avenel, NJ 07001, USA. ISSN 0017-5749

LETTER TO THE EDITOR

Free radicals in colitis

SIR,—I read with interest the recent article by Keshavarzian and coworkers.¹ They clearly show that reactive oxygen species play a part in their model of experimental colitis.

I disagree, however, with certain of their statements and conclusions. Firstly, superoxide anion is generated extracellularly by neutrophils and macrophages by an NADPH dependent oxidase enzyme present within the cell surface membrane² and not intracellularly as the authors stated. Secondly, I would disagree that superoxide anions cannot cause appreciable tissue injury in vivo as they are known to inactivate enzymes, lyse red blood cells, kill cells in tissue culture, kill bacteria, degrade DNA, and depolymerise hyaluronic acid.³

Superoxide anion can also result in the formation of other toxic species such as hydrogen peroxide, and the hydroxyl radical as a consequence of dismutation, and the Haber-Weiss and Fenton reactions.⁴

Thirdly, the hydroxyl radical is a highly reactive species with a rate constant of $10^{10} \text{m}^{-1} \text{s}^{-1}$. It reacts in a non-specific fashion with anything it contacts and is trapped by its own microenvironment. Therefore it is argued that it does not have a specific quencher.⁵ The fact that the authors were not able to influence the inflammatory process with dimethyl sulphoxide does not exclude the hydroxyl radical as a contributory agent.

Finally, it is not surprising that the xanthine oxidase pathway is not a major source of reactive oxygen metabolites in colitis of a non-ischaemic origin, as in aerobic conditions xanthine oxidase exists mainly as xanthine dehydrogenase⁶ and in response to ischaemia xanthine dehydrogenase undergoes irreversible limited proteolysis by a calcium activated protease to form xanthine oxidase.⁷ Xanthine oxidase can generate superoxide anions but this would only become an important source in the presence of gut ischaemia.

Free radical production by neutrophils may be an important mechanism of tissue injury in the experimental colitis described,¹ and inflammatory bowel disease in humans, and modification of this may have important implications for treatment. The key, however, to the pathogenesis of inflammatory bowel

disease is the determination of the stimulus which initiates the inflammatory response.

Reply

SIR,—I thank Dr Williams for his interest in our work. We agree that superoxide anion is generated by neutrophils by a membrane-bound NADPH dependent oxidase. As we indicated in our paper, several authors have stated that superoxide anions can cause tissue injury in vivo (through pathways that are stated in Dr Williams's letter) only through their metabolites, hydroxyl radicals, or hypochlorous acid.^{1,2}

We believe that the lack of any protective effect of either a hydroxyl radical scavenger or an iron chelating agent, that inhibit production of hydroxyl radicals, on colitis strongly suggests that hydroxyl radicals do not play a major part in our colitis model. Dr Williams's argument in favour of hydroxyl radicals cannot reconcile the fact that deferoxamine did not influence the colitis. We conclude that our data only suggest that hypochlorous acid is a major reactive oxygen metabolite in colitis. Our conclusion is supported by others.^{1,3}

Several authors have suggested that ischaemia may have a role in inflammatory bowel disease. We therefore thought that the xanthine oxidase pathway should be evaluated as a possible source of reactive oxygen metabolites. Our data indicated that this pathway is not important in our colitis model.

NOTES

New journal

The Romanian Society of Gastroenterology is launching the *Romanian Journal of Gastroenterology* in 1991 and the journal is particularly keen to attract contributions from Western Europe and the United States. Reviews, original articles, and case reports are welcome. Further details from Professor Dr Stefan Popescu, Editor, IIIrd Medical Clinic, Str Croitorilor no 19-21, RO 3400 Cluj Napoca, Romania.

British Society of Gastroenterology Endoscopy Committee

The second basic theory course on endoscopy, approved and organised by the Endoscopy Committee of the British Society of Gastroenterology, will be held on the afternoon of Friday, 12 April 1991 at the Manchester meeting of the British Society of Gastroenterology. This course is aimed at trainee endoscopists and endoscopy assistants. Full details and registration forms are available from Ms Anne Pearson, Confrex, PO Box 963, Brighton, East Sussex BN1 6TN.

French digestive pathology course

The French speaking Congress on Digestive Pathology (Les Journées Francophones de Pathologie Digestive) will take place in the Corum of Montpellier from 16-20 March 1991. Information: CPS 168, quai Louis-Blériot - 75016 Paris. Tel: 45.24.34.63.
