the outstanding beneficiary. Few attempts have been made to summarise the present state of knowledge for the non-specialist, and therefore this slim volume of essays, edited by Michael Farthing is – in principle – welcome. They will be placed by a natural order of gut viruses as the second to hepatitis, each being prefaced by a chapter on the pathogenesis of infection and followed by chapters devoted to specific families of viruses. This structure is consistent with the highly focused interests of the contributors, and thus each chapter is essentially a summary of what is known in each of the selected topics.

So far, so good, and for the most part very good, but don’t make it an easy book for the uninstructed, particularly for those unfamiliar with the language and techniques of molecular biology. The series title of ‘Clinical Gastroenterology’ might be thought to promise something for the clinician, but although there is much of clinical relevance in this book, the information is scattered within different chapters. Most of the authors have not attempted to summarise their contributions, although where this has been done, it is helpful, nor has the information been assembled within an editorial structure. Light editing seems to be a consistent feature of these series; while this makes life easier for editors, it does result in books which may seem to experts talking to each other, or even to themselves, rather than to a clinical readership. When the topics and technologies are familiar, this is not a disadvantage, but when, as here, the reader is faced with a daunting array of acronyms and genetic jargon, it does not make for an easy read. This book is a valuable source of information that is not otherwise easily found, but distinctly for the library shelf rather than the clinical or domestic bedside.

DAVID WINGATE

In this era of minimally invasive surgery the second edition of this book provides an admirable update on standard procedures as well as developing areas of diagnosis and treatment in gastrointestinal endoscopy and radiology. The editors have drawn from their own experience and that of an internationally recognised group of experts to provide a comprehensive and detailed manual which will appeal to the clinician and skilled practitioner alike, incorporating as it does a good ‘Which?’ guide to the various techniques described and combining this with a common sense ‘Waycode’ type approach.

The generally consistent style of writing complemented by appropriate illustrations and tables makes the book delightfully easy to read and only occasionally is this pattern lost with the introduction of detail on physiology and scientific concepts which might more comfortably be postponed in a more general book on gastroenterology.

The complementary nature of endoscopy and radiology is emphasised and the range of options described takes cognisance of the fact that not all units have all the necessary equipment or skills but rather allow the reader to choose ‘a best buy.’ Guidance is provided on preparation of the patient, but the need for explanation and reassurance to the patient is emphasised and ‘is often of more value than 10 mgs of diazepam.’ Sedation is one area where the individual practitioner will have to develop his own methodology but the book excels in providing a balance on the indications for a particular procedure and when indeed it might be unnecessary. The equipment used is well described and it is often helpful to be informed of the supplier.

This edition provides a timely recognition of the expansion of day case procedures and how they can be performed to the best advantage. It is a must as a reference for the novice and the expert alike.

Clinical investigation of gastric function

Gut has at last lifted its ban on reviews of books derived from conferences, so that the thousands of Gut readers are no longer denied information in such useful gastroenterological volumes as this ‘fin-de-siecle appraisal of gastric function tests’. Scarpignato and Bianchi Porro are to be congratulated on mounting the 1988 symposium in delectable Sirmione and for choosing the international team of experts. There are two authors for most topics, one for methodology and the other for clinical significance. Part I of the book covers secretion of acid, pepsins, intrinsic factors, mucus, and hormones, as well as pH and blood flow. Part II describes motility (emptying, manometry, electrophysiology, electromyography, and motility) with a final chapter on morphology.

For the last 500 years there have been two schools of investigations of the function of the stomach. The allochemists such as Paracelsus, van Helmont, and Sylvius considered physiological processes, diseases, and drugs as chemical changes: digestion was the chemical effects of acid and a ferment. The iatrophysicists, iatromechanics, or iatromathematicians explained life and disease by the laws of physics: that to Borelli digestion was a mechanical process from the force of contraction of the stomach. The last 40 years has seen the zenith of the chemical approach to the stomach. Measurements of maximal acid output have elucidated the hypersecretory situation of duodenal ulcer disease and its medical and surgical treatment. Almost every peptic ulcer can now be healed and kept healed by the pharmacological triumphs of the pharmaceutical industry. Perhaps the 1990s will be equally productive in our understanding of the pathophysics and treatment of the motor disorders of the stomach?

J H BARON

The ban on the publication of symposium proceedings mentioned by Dr Baron has not been lifted for the sufficient reason that it never existed. The fact is that although many such proceedings are published, there are few which merit the attention of readers of Gut by achieving acceptable standards of literacy, informed comment, and presentation. – Book Editor.

All titles reviewed here are available from the BMJ Bookshop, PO Box 295, London WC1H 9TE. Prices include postage in the UK and for members of the British Forces Overseas, but overseas customers should add £2 per item for postage and packing. Payment can be made by cheque in sterling drawn on a UK bank, or by credit card (Mastercard, Visa, or American Express), stating card number, expiry date, and full name.

NOTES

FASEB Conference: Gastrointestinal Tract. Development and Repair – Cellular and Molecular Aspects

The FASEB conference on the Gastrointestinal Tract will be held at Copper Mountain, Colorado on 4–9 August 1991. Further details from: Conference Office, FASEB, 9650 Rockville Pike, Bethesda, Maryland 20814, USA.

Mayo-European Course in Gastroenterology

A postgraduate course cosponsored by the Mayo Foundation and the Vienna Medical Education Office will be held in Vienna, Austria (18–21 August), Budapest, Hungary (22–23 August), and Prague, Czechoslovakia (24 August, optional). For information contact: Siegfried Meryn, MD, Mondial Congress, Faumangasse 4, A-1040 Vienna, Austria; tel: 0222–588040; fax: 0222–5871268. S F Phillips, MD, Gastroenterology Unit, Mayo Clinic, Rochester MN 55905.

Pancreatic meeting: progress and prospects

The Pancreatic Meeting: progress and prospects will be held at The University of Southampton, 5–6 September 1991. Further details from: Mrs June Daniels, Unit Administrat- ive Secretary, University Surgical Unit, F Level, Centre Block, Southampton General Hospital, Tremona Road, Southampton SO1 6HU. Tel: 0703 777222, ext 4508.

Sir Francis Avery Jones BSG Research Award 1991

Applications are invited by the Education Committee of the British Society of Gastroenterology, who will recommend to Council the recipient of the 1992 award. Applications should include:

1. A manuscript (2 A4 pages only) describing the work conducted.
2. A bibliography of relevant personal publications.
3. An outline of the proposed content of the lecture, including title.

A written report certifying that all or a substantial part of the work has been personally conducted in the United Kingdom or Europe.

The award consists of a medal and a £100 prize. Entrants must be 40 years of age or less on 31 December 1992 but need not be a member of the BSG. The recipient will be required to deliver a 40 minute lecture at the Spring Meeting of the Society in 1992. Applications (15 copies) should be made to: The Honorary Secretary, BSG, 3 St Andrew’s Place, Regent's Park, London NW1 4LB by 1 December 1991.
