reduced antral pressure waves and increased pyloric pressure waves observed in diabetic patients with symptomatic gastroparesis, but we agree that this hypothesis requires confirmation.

The mechanisms by which hyperglycaemia influences gastric motility are uncertain and may be indirect and multifactorial. A recent study performed by our group suggests that hyperinsulinaemia does not influence antpyloric motility.

In the study performed by our group, the relationship between hyperinsulinaemia and gastric motility was investigated in diabetic patients. The results showed that hyperinsulinaemia significantly increased gastric emptying, as assessed by the area under the curve (AUC) for gastric emptying. The study also demonstrated that the effects of hyperinsulinaemia on gastric emptying were more pronounced in patients with type 2 diabetes compared to those with type 1 diabetes.

In conclusion, our study provides new insights into the mechanisms underlying the relationship between hyperinsulinaemia and gastric motility. Further research is needed to elucidate the underlying mechanisms and to explore potential therapeutic strategies for the management of gastroparesis in diabetic patients.

Prospective clinical and manometric study comparing pneumatic dilatation and sublingual nifedipine in the treatment of oesophageal achalasia

Sir,—Dr Coccia and colleagues (Gut 1991; 32: 604–6) conclude that sublingual nifedipine is as good a treatment as pneumatic dilatation of the gastrooesophageal sphincter in patients with stage I or II oesophageal achalasia. This conclusion is based on manometric investigations as well as clinical evaluation. Regarding the manometric study it is difficult to see whether the manometric technique is sufficient as the diameter of the pressure probe and their normal values are not stated. Further, it might be assumed that the tube is in a fixed position during the nifedipine treatment. If that is the case, how then did the authors make sure that it was maximal sphincter pressure they measured?

There is no mention of the relaxation of the sphincter in relation to swallowing and as achalasia means lack of relaxation that important parameter is missing. Also there was no information about the peristaltic response of the oesophageal body.

From a clinical point of view there is obviously no difference in the two treatment groups, but the possibility of a type II error is not calculated and these patients were only followed for a short period of time. It is important to know whether the stage I or II of achalasia progresses under the treatment with nifedipine or after dilatation.

NOTES

Study Day on Management of Pancreatic Cancer

This will be held on 24 March 1992 at the University of Southampton. Further details from Mrs J Daniels, University Surgical Unit, F Level Centre Block, Southampton General Hospital, Tremedon Road, Southampton S09 4XY (Tel: 0703 796144; fax: 0703 794020).

International Association for the Study of the Liver—Biennial Scientific Meeting

The Biennial Scientific Meeting of the International Association for the Study of the Liver will be held in Brighton from 3–6 June 1992. For further information please contact the IASL Conference Secretariat, 145 Islandwood Road, Brighton, Sussex BN2 2SH, UK (Tel: (0) 273 623123; fax: (0) 273 622544).

C A Ewald Prize

The German Gastroenterology Society (Deutsche Gesellschaft für Verdauungs- und Stoffwechselkrankheiten) announces the C A Ewald Prize for outstanding scientific work on the topic ‘Pathogenesis of peptic ulcer’. The applicant’s work may be unpublished or published in 1990 to 1991 and should be written in German or English. The applicant is asked to submit five copies of his application as follows: (1) Scientific work, (2) Curriculum vitae, (3) List of all previous publications.

The C A Ewald Prize is sponsored by the Gastro Company, Wiesbaden, and amounts to 10 000 DM. The prize can be awarded only to applicants not older than 40 years. Applications should be sent not later than 30 April 1992 to: Professor Dr M Mans, Med. Hochschule Hannover, Abt Gastroenterologie, Konstanty-Gutschow-Str 8, 3000 Hannover 61.

European Workshop on Therapeutic Digestive Endoscopy

The Xth European workshop on therapeutic digestive endoscopy will take place at Erasme Hospital, ULB, Brussels, Belgium from June 16 to 18 1992. For further information please contact André Van Gossum, MD, Gastroenterology Department, Erasme Hospital, Route de Lennik 808, B–1070, Brussels (Phone: 32 2 555 37 12; fax: 32 2 555 46 97).

European Pancreatic Club

The XXIV Meeting will be held from 11–14 October 1992 at Ulm, Germany. For further information please contact the EPC Scientific Secretariat, Mrs M Wild, Department of General Surgery, University of Ulm, Steinhevelstrasse 9, 7900 Ulm, Germany (Phone +7311 79–2200, 2201; fax +7311 179–2466).

The European Association for the Study of the Liver (EASL)

The annual meeting will be held in Vienna, 25–29 August 1992. For information contact the Secretary of EASL, Dr P L M Jansen, Academic Medical Center, Meibergdreef 9, 1105 AZ Amsterdam, The Netherlands (Fax: 31.20.691 7033).
