Microarrays can be used to demonstrate differences in genetic content between Helicobacter pylori strains, giving a foretaste of how research may be conducted in the near future.
could only detect major differences in genetic content whereas in the near future microarrays will be able to detect small differences in individual genes. That will be the next leap forward.

ACKNOWLEDGEMENTS

John Atherton is funded by a Senior Clinical Fellowship from the Medical Research Council.

Gut 2002; 50:293–294

7th European Forum on Quality Improvement in Health Care

We are delighted to announce this forthcoming conference to be held in Edinburgh, Scotland on 21–23 March 2002. Delegate enquiries are welcome.

The themes of the Forum are:
• Leadership, culture change, and change management
• Achieving radical improvement by redesigning care
• Health policy for lasting improvement in health care systems
• Patient safety
• Measurement for improvement, learning, and accountability
• Partnership with patients
• Professional quality: the foundation for improvement
• Continuous improvement in education and training
• People and improvement.

Presented to you by the BMJ Publishing Group (London, UK) and Institute for Healthcare Improvement (Boston, USA). For more information contact: quality@bma.org.uk or look at the website www.quality.bmjpg.com. Tel: +44 (0)20 7383 6409; fax: +44 (0)20 7373 6869.
