

Supplemental Table 3

The figure displays a heatmap visualization of data from Supplemental Table 3. The heatmap is organized into two main sections separated by a vertical line. The left section features a prominent vertical red bar on the far left, followed by a white column, and then a large red block. The right section is a dense grid of cells, with red indicating high values and light blue indicating low values. Yellow headers are present at the top of the right section, identifying columns such as 'Sample', 'Condition', 'Time', 'Gene', and 'Expression'. The rows are labeled with gene names and sample identifiers, though they are too small to read in detail. The overall pattern shows a strong correlation between the left and right sections, with many cells showing high values (red) and some cells showing low values (light blue).
