| US14, 16, 19, 22      | CEUS 14, 15, 21  
- 2/2 studies: peak signal intensity after contrast injection and time-to-peak 14, 15, 21  
- 1/2 studies: area under the time-intensity curve 15, 21, wash-in rate 15, 21, wash-out rate 21, fall time 21, mean transit 21 and percentage of increase in wall brightness 15 |
| Elastography 14, 20, 21 | 3/3 studies: strain ratio measurement 14, 20, 21  
- Doppler US 15  
- 1/1 study: color Doppler signal intensity 15 |
| CT 23, 24, 26         | CE-CT 23, 24, 26  
- 2/2 studies: bowel wall thickening 23, 24, mucosal/mural contrast enhancement 23, 24 and mesenteric vascularity 23, 24  
- 1/2 studies: prestenotic dilatation 24, presence of lymphadenopathy 24, stratification 24, and mesenteric fat stranding 24 |
| PET-CT 26             | 1/1 study: mean of standardized uptake values (SUVs) 26 |
| MRI 22, 24, 29, 32    | CE-MRI 22, 24, 29, 32  
- Of these: three studies additionally used DW-MRI 29, 32, 33, one used delayed-enhancement MRI 22, one MT-MRI 29 and one DCE-MRI 22  
- 7/7 studies: contrast-enhancement 22, 25, 31-33  
- 5/7 studies: bowel wall thickness 29, 31-33, mesenteric vascularity 29, 31-33 and pattern of contrast enhancement 29, 31-33  
- 3/7 studies: presence of ulceration 22, 32, 34, and apparent diffusion coefficient 29, 31, 34  
- 2/7 studies: presence of fatty proliferation/creeping fat and/or fat imbibition 31, 33, presence of fistulas 34, 33, presence of intra- or extramural abscesses 22, 33, mesenteric lymphadenopathy 29, 31, bowel wall edema 25, 34 and percentage of enhancement gain after contrast injection between 70 s and 70 min 29, 32  
- 3/7 studies: normalized MT ratios 29, T1 ratio 29, T2 mural ratio 33 and T2 mural mesentery ratio 33, presence of high signal intensity on T2 (HASTE) and T2 with fat saturation 32, blured margins 32, mural/lymph node cerebrospinal fluid signal intensity on T2-weighted fat-saturated images 32 and several parameters after contrast injection like mucosal hyperenhancement at 70 s and 7 min 22, stability and progression of enhancement over time 22, rise time 22, peak enhancement 22, AUC during wash-in 22, AUC after 25 seconds 22, AUC after 70 seconds 22, initial slope 22, maximum slope 22, wash-in perfusion index 22, initial slope of increase 22 and time-to-peak 22 |
| PET-MRI 29            | 1/1 study: SUVs 29 |

**SUPPLEMENTAL TABLE 1: OVERVIEW OF CURRENTLY USED CROSS-SECTIONAL IMAGING PARAMETERS ASSESSING THE INFLAMMATORY AND FIBROTIC CHARACTERISTICS OF CROHN’S DISEASE STRICTURES.** ADC, Apparent Diffusion Coefficient; AUC, Area Under the Curve; CE-CT, Contrast-Enhanced CT; CE-MRI, Contrast-Enhanced MRI; CEUS, Contrast-Enhanced Ultrasound; CT, Computed Tomography; DCE-MRI, Dynamic Contrast Enhanced-MRI; DW-MRI, Diffusion-Weighted MRI; MRI, Magnetic Resonance Imaging; MT-MRI, Magnetic Transfer MRI; SUV, Standard Uptake Value and US, Ultrasound. Indicated references correspond to the reference list of the main document.
