

Supplementary Table 3. Pathological lesions that should be considered a success of screening when detected and treated at either baseline screening or follow-up surveillance.

Pathological lesion	Agreement	Grade
Resected cancer, confined to the pancreas, with negative margins	96% (at follow-up) 85% (at baseline)	1
Multifocal PanIN-3	99%	2
Unifocal PanIN-3	97%	2
IPMN with high-grade dysplasia	97%	2
Pancreatic neuroendocrine tumor ≥ 10 mm	75%	2

PanIN-3, pancreatic intraepithelial neoplasia-3; IPMN, intraductal papillary mucinous neoplasm;
