

**Supplementary Figure S3: Anti-TNF increased IL-10 in BMDMs is dependent on Fc $\gamma$ R (related to Figure 4):**

IL-10 levels in medium of *Rag1KO* BMDMs (grey) and *FcgRKO/Rag* KO BMDMs (red) stimulated with LPS (100 ng/ml), IFN- $\gamma$  (20 ng/ml) and the anti-TNF mAb (10  $\mu$ g/ml) or Fab (equimolar concentration: 7.2  $\mu$ g/ml) after 48 hours (A). Levels of *Il10* normalized for *Gapdh* expression in BMDMs after 24 hours (B).
