

ROTER

In cases of dyspepsia with or without a radiologically proven ulcer Roter will normally provide prompt symptomatic relief and lead to rapid healing of the lesion. The reputation of Roter is world wide. It is a complete treatment in itself and requires no additional antispasmodics or anticholinergics.

FORMULA: Each Roter tablet contains: Bismuth Subnitrate Roter (350 mg.), Magnesium Carbonate (400 mg.), Sodium Bicarbonate (200 mg.) and Cortex Rhamni Frangulae (25 mg.).

PACKINGS OF ROTER TABLETS: Tins of 40 and 120, also dispensing sizes, 360 and 720 (P.T. exempt).

ROTER IN PEPTIC ULCER

No nourishment here . . .

. . . unless an adequate supply of pancreatic enzymes is available to complete digestion.

Pancrex V is the most effective preparation for replacing pancreatic secretion in the gut. It is indicated in cystic fibrosis of the pancreas, chronic pancreatitis, pancreatectomy, post-cholecystectomy and in all digestive disorders where a relative deficiency of pancreatic enzymes is a contributory factor. Pancrex V is activated, whole dried pancreas

having a tryptic activity approximately equal to 5 times that of Pancreatin B.P.

just peel back and open

new **Maalox[®]** gives **3** outstanding benefits

Greater, more lasting antacid effect

Maalox has a greater acid neutralising capacity than aluminium hydroxide gel, and its action is more prolonged.

No constipation

Because of the presence of magnesium hydroxide in Maalox, there is no danger of constipation.

More palatable—for longer

Maalox has a pleasant taste and smooth consistency. It remains acceptable long after other antacids have grown wearisome.

when the stomach burns

These three benefits give Maalox a special value in patients who must take antacids frequently or for long periods. Maalox is a creamy white colloidal suspension of magnesium and aluminium hydroxide gels. It is presented in bottles of 16 fl. oz.

KANTREX* CAPSULES

STOP THE SPREAD
OF INFECTION

How do you select the most effective therapy?

FACT "During the last few years the most popular form of treatment has been a combination of sulph-onamide and oral streptomycin."¹

FACT "Treatment... has become more complicated since the appearance of drug-resistant strains of *Shigella sonnei*."¹

FACT "... 87% of *S. sonnei* were found to be resistant to sulphadiazine... for the antibiotics... the percentages of resistant strains were: potassium penicillin G, 93%; streptomycin, 17%; tetracycline,

12%; chloramphenicol, 11%; ampicillin, 6%; sodium colistimethate, 2%; kanamycin, 1%; neomycin, 1%."²

FACT Unlike neomycin, kanamycin does not irritate the gut wall, nor does it give rise to reactive diarrhoea.

FACT KANTREX CAPSULES ARE YOUR LOGICAL CHOICE FOR TREATING SONNE DYSENTERY broad-spectrum coverage... no side effects

PRESENTATION AND PRICE Basic NHS Cost: 52/4 for 30 capsules; 172/- for 100 capsules

A remarkably simple treatment in pancreatic enzyme replacement

Hitherto there has not been any reliable method of determining lipase activity in pancreatic extracts — none that ensured adequate control of fat digestion. This is now possible with Cotazym.

Cotazym (concentrated hog pancreas extract) enables known amounts of lipase to be administered easily and control to be established rapidly and accurately.

Cotazym is effective at lower dosage than has previously been possible and has, moreover, greater therapeutic activity. It has no offensive odour or taste and this, together with the simple method of its administration, makes it extremely acceptable to patients.

INDICATIONS

Fibrocystic disease
Pancreatic deficiency states
Post-gastrectomy malabsorption
Steatorrhoea

COTAZYM

Each Cotazym capsule contains:

Lipase — sufficient to digest 17G. dietary fat
Trypsin — sufficient to digest 34G. dietary protein
Amylase — sufficient to digest 40G. dietary starch

Bottles of 100 capsules — Basic N.H.S. Price 33/4d

Dosage — 1-3 capsules with each meal or as directed by the physician.

Organon Laboratories Ltd., Crown House, London Road, Morden, Surrey

**2 TABLETS TWICE A DAY—
PROVEN MAINTENANCE THERAPY**

In Ulcerative Colitis

available as a 0.5 g. tablet, either plain or enteric coated

FIRST DEMONSTRATION . . . RESULTS SIGNIFICANT

"This is the first demonstration in a formal trial that any treatment reduces the relapse-rate in ulcerative colitis, 24 out of 34 patients taking 2 g. of sulphasalazine daily remained free of symptoms for a year. This result is significantly different from that obtained in a comparable group of patients who received a placebo."

PREFERABLE TO SYSTEMIC CORTICOSTEROIDS

"We have shown that sulphasalazine, 0.5 g. four times daily, is often effective in maintaining remission . . . and it therefore appears preferable to systemic corticosteroid drugs for this purpose."

REMISSION FOR ONE YEAR

"24 patients remained in symptomatic remission for a year while taking 2 g. of sulphasalazine daily, whereas only 8 remained symptom-free in the placebo group."

NORMAL MUCOSA

"2 of the 24 patients who remained symptom-free for a year while on sulphasalazine had a haemorrhagic mucosa at the end of the trial. The remaining 22 patients had a non-haemorrhagic mucosa which in many cases appeared normal."

MINIMAL SIDE EFFECTS

"In the present trial, using a dose of 2 g. daily, only 3 patients out of 34 had to discontinue treatment because of side-effects."

WHITE CELL COUNT

"In the patients treated with sulphasalazine there was no difference in the haemoglobin level before and after treatment; but the mean white-cell count was lower after six months or a year than at the start of treatment, though in no patient was it less than 4500 per c.mm."

The Vitamin Co-factors of Enzyme Systems

F. A. Robinson, Chairman of Crookes Laboratories Ltd.

A survey of present knowledge about the group of vitamins that are now recognized as co-factors of enzymes, describing the history of each vitamin, the method by which it was isolated, how its chemical constitution was determined, and, where appropriate, how it was synthesized. The most important natural sources of each vitamin and the effects of deficiency in humans, animals, plants, insects and micro-organisms are described in detail. Dr. Robinson also discusses the nature and properties of chemical analogues and antagonists, and the function of each vitamin as a co-enzyme.

The Corticovisceral Theory of The Peptic Pathogenesis of Ulcer

K. M. Bykov, Director of the I.P. Pavlov Institute of Physiology, and I. T. Kurtsin, Director of the Laboratory of Corticovisceral Pathology

This is the second of a series of carefully selected translations and surveys of Russian contributions in the fields of conditioned reflexes and cerebrovisceral and behavioural physiology. The late Dr. Bykov began his work in the laboratories of Pavlov and developed a new area of research which he referred to as corticovisceral physiology and pathology. The extensive series of studies which he undertook with Dr. Kurtsin led to the corticovisceral theory of the pathogenesis of peptic ulcer, the subject of this monograph.

Submicroscopic Ortho- and Patho-Morphology of The Liver

in two volumes

H. David, Humboldt University, Berlin

These volumes form the first comparative submicroscopic morphology of the liver, covering investigations not only of the human liver but of that of 24 animal species of varying ages. The two volumes are complementary, the first containing text and the second some 360 photomicrographs. This work will be of considerable value to electron- and light-microscopists and to all engaged in medical and surgical research.

Whether you call it 'mucous colitis', 'spastic colon' or 'irritable colon' the clinical picture is the same – a chronic colonic disturbance with spasm/pain, disordered bowel habit (constipation or diarrhoea) and sometimes the passage of mucus per rectum.

Merbentyl (dicyclomine hydrochloride tablets B.N.F.) can relieve spasm/pain and help restore normal bowel activity in a very short space of time.

Biogastrone heals gastric ulcer

now
Biogastrone[®] 25mg.
Carbenoxolone sodium
safeguards
against
recurrence

Many clinical studies have already proved the healing influence of Biogastrone on gastric ulcer. Now confirmation comes from a new source. 'A controlled double-blind trial of carbenoxolone in the treatment of radiologically confirmed gastric ulcer is reported. Radiological examination at two weeks showed a reduction in the ulcer area of 88% in the carbenoxolone group

compared with 50% in those receiving dummy tablets ($P=0.01$). These results show that carbenoxolone is very effective in reducing the size of the ulcer.'* After healing, Biogastrone 25 mg. tablets are given as a safeguard against recurrence. The dosage is one tablet twice daily.

*Brit. med. J., (1965) 2: 1274

Presentation:

Tablets of 50 mg. carbenoxolone sodium for initial healing.
Tablets of 25 mg. to prevent recurrence.

Berk Pharmaceuticals Limited, Catteshall Lane, Godalming, Surrey.

ANTIBIOTICS AND THE INTESTINAL FLORA

Treatment with broad spectrum antibiotics suppresses the normal flora, which may be replaced by abnormal resistant organisms causing diarrhoea.

This change can be prevented or reversed by the implantation of *Lactobacillus acidophilus* which has been rendered antibiotic-resistant, and is thus able to multiply freely under these abnormal conditions. The products of growth of this organism are inimical to that of many other bacteria^{1,2} and thus contribute to its rapid preponderance over other species.

Oral treatment with antibiotic-resistant *L. acidophilus* in the form of ENPAC has been shown to eliminate *Candida* from the faeces of infants with antibiotic-induced diarrhoea, with relief of symptoms succeeded by rapid gain in weight^{3,4} and greatly to reduce the numbers of staphylococci in the faeces of patients treated with tetracyclines.⁵

LONGER-LASTING DRIP THERAPY

Gastrils—first ever antacid pastilles. Gastrils do not break up in the mouth like tablets; they dissolve slowly and smoothly, so give sustained drip therapy for the treatment of peptic ulcer.

Gastrils contain a co-dried gel of aluminium hydroxide and magnesium carbonate, a buffer antacid comparable in activity to freshly prepared liquid aluminium hydroxide gel. Gastrils rapidly buffer gastric pH to an optimum level, and keep it there, without risk of acid rebound.

To relieve the tedium of constant antacid therapy, every Gastrils prescription is dispensed in equal quantities of two delicious flavours—mint and fruit. Few antacids are as effective as Gastrils—none is as good to take!

GASTRILS

ANTACID PASTILLES

INDICATIONS Hyperacidity, peptic ulcer, gastritis, heartburn, oesophagitis and hiatus hernia.

FORMULA Each pastille contains 500 mg. co-dried gel of aluminium hydroxide and magnesium carbonate.

BASIC N.H.S. 24 individually wrapped Gastrils in carton 3/-.

COST 24 individually wrapped Gastrils from dispensing pack: 2/6½d. Gastrils are prescribable on form E.C.10

Robinul[®] glycopyrronium bromide (glycopyrrolate ROBINS)

Patent No. 865,453

Robinul-PH[®] (Robinul with phenobarbitone)

Robinul acts quickly in relieving ulcer pain and establishes a near-ideal healing environment at the ulcer site. Robinul reduces or eliminates the free HCl under both basic conditions and conditions of stress by virtue of a "medical vagotomy". By exerting a more specific pharmacological action on the gastro-intestinal tract than any other organ system, blurred vision, dry mouth etc. are avoided or occur only rarely when Robinul is given in the recommended dosage range.

Indications: In addition to its primary indications for duodenal and gastric ulcer, Robinul is indicated for other G-I conditions which may benefit from anticholinergic therapy. Robinul-PH is indicated when these situations are complicated by mild anxiety or tension.

Dosage: Should be adjusted according to individual patient response. Average dose is 1 or 2 tablets three times a day, in the a.m., early p.m.,

and at bedtime. In acute conditions with severe manifestations, larger dosage of plain Robinul may be indicated until symptoms subside. Thereafter, dosage should be reduced to the minimum required for maintenance of symptomatic relief.

Precautions: Administer with care to patients with incipient glaucoma. Contraindicated in acute glaucoma, prostatic hypertrophy, and in the presence of urinary bladder neck obstruction and in pyloric obstruction or stenosis with significant gastric retention. Robinul-PH is contraindicated in patients sensitive to phenobarbitone or with advanced hepatic or renal disease.

Packaging: ROBINUL (pink) and ROBINUL-PH (white) tablets are available in bottles of 50 and 500.

Reference: Practitioner (1965) Vol. No. 195, Pp. 335-339; Ann N.Y. Acad Sci (1962) 99:153 Amer J. Med Sci. (1963) 246:325.
