

Supplementary Table 1. Cancer sphere cells and their mutational profiles, ERBB2 status and CD44v6 expression.

COSMIC-reported mutation of the analyzed genes (*upper panel*). Mutation types (missense SNV, frameshift deletion or insertion, and multiple mutations) are indicated. Percentage of mutation rate in CRC patients reported in TCGA database (white bars) and in C-CSCs (blue bars) are indicated on the right. ERBB2 status and CD44v6 expression of CSphCs and clinical data related to CRC patients are reported (*lower panel*).
