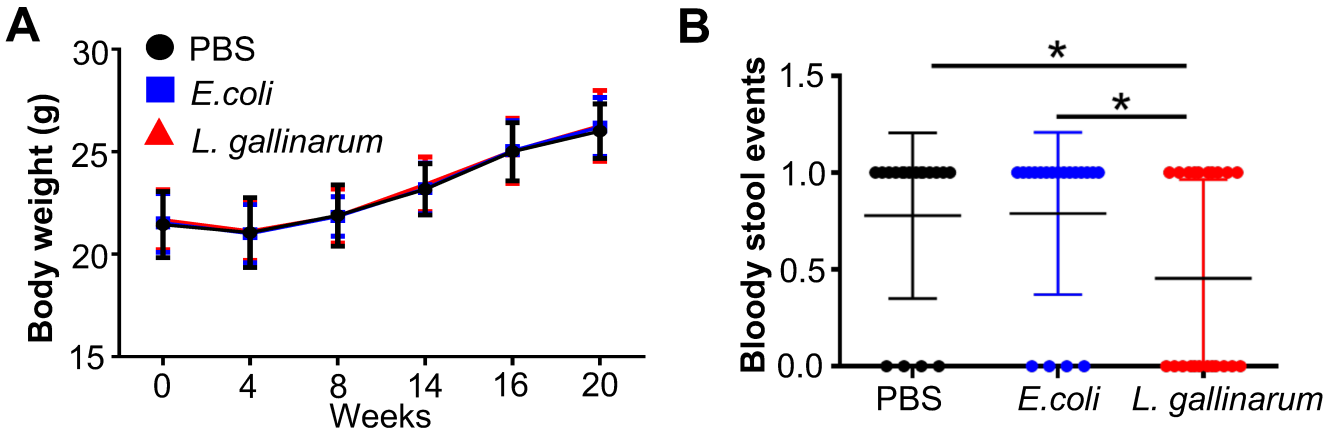
Figure S3



Supplementary Figure 3. Physiological features of male AOM/DSS-induced CRC mice before sacrifice. (A) There was no significant difference in body weight among three groups of mice during the period of gavage. **(B)** Number and incidence of bloody stool in *L. gallinarum* group were lower than PBS control and *E.coli* control group after gavage for 20 weeks. *P*-value is calculated from one-way ANOVA. *$p < 0.05$.
