

Mishra et al Supplementary Figure S14

Supplementary Figure S14. Densitometric quantification of ARID3a protein expression in the intestine of FMT recipient mice (a), FCM-treated enteroids (b) and Caco2 cells (c); and in the intestines of ethanolamine (Et) treated mice (d) compared to their corresponding controls. Values presented are the mean of n=5-8 mice and enteroids and Caco-2 cell culture experiments performed in triplicates and repeated 2-3 times, and error bars are the standard error of means. P values with * <0.05 ; ** <0.01 ; *** <0.001 are statistically significant calculated by the ANOVA and/or t-test.
