

Supplementary Figure S4: Anti-TNF levels and intestinal TNF expression (related to Figure 6)

Total serum IgG levels in serum of *Rag1* KO and *LysMcrel10ra^{fl/fl} Rag1* KO determined by ELISA reflecting circulating levels of therapeutic anti-TNF mAb or isotype control mAb (A). Intestinal *Tnfa* levels normalized for *Gapdh* expression, on whole colonic tissue mRNA, determined by qPCR (B). Significance was determined by Kruskal-Wallis followed by Dunn's posthoc test.
