

Supplementary Figure 4

To Figure 2: Distribution of variant allele frequencies in RCDII biopsies. Scatter graph depicts frequency of variant allele frequency (VAF) detected per patient with each dot representing the mean VAF for every single gene called from various runs and techniques. Overlaid box (5-95 percentile) and whiskers ranging from min to max. Red dots indicate JAK1 mutations, blue dots STAT3 mutations and green dots TNFAIP3/A20 or TNIP3.
