

Supplementary Figure 4

Supplementary Figure 4: Concentration-dependent binding profile of vedolizumab to T_{Reg} and T_{Eff} cells under different culture conditions.

(A), (B), (C) Quantitative flow cytometry of VDZ⁺ cells among $\alpha 4\beta 7^+$ T_{Reg} and T_{Eff} cells after incubation or stimulation with MnCl₂ (A), PMA/ionomycin (B) or anti-CD3/CD28 (C) and subsequent staining with the indicated concentrations of fluorescently labelled VDZ. Data are expressed relative to T_{Eff} cells. Statistical significance was calculated using Student's t-test and mixed-effects analysis with Sidak's multiple comparison test. n = 2-14 healthy controls per group.

Sample donor characteristics are listed in *Supplementary Table S14*.
