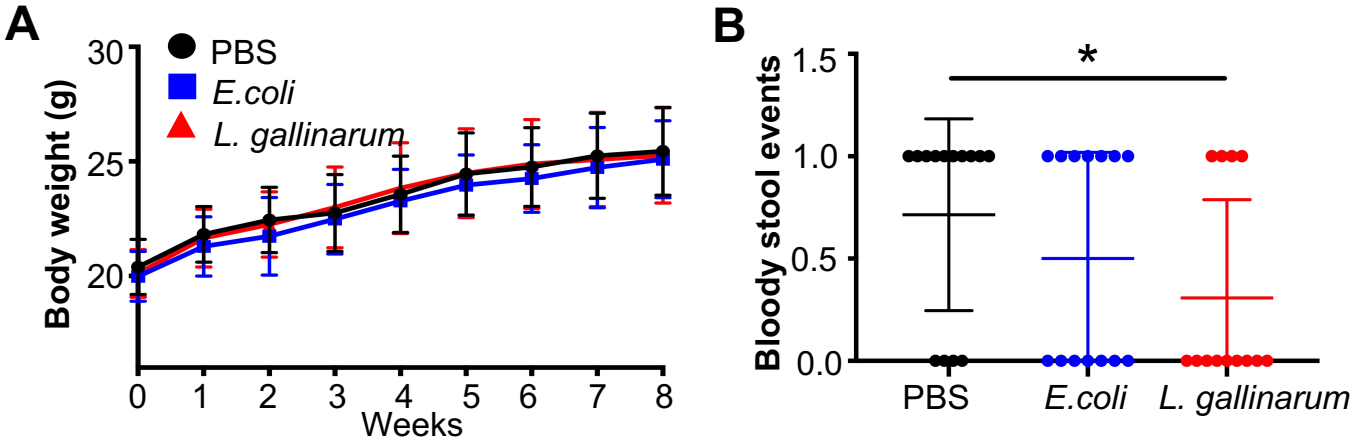
Figure S1



Supplementary Figure 1. Physiological features of male *Apc*$^{Min/+}$ mice before sacrifice. (A) There was no significant difference in body weight among three groups of mice during the period of gavage. **(B)** Number and incidence of bloody stool in *L. gallinarum* group were lower than PBS control group after gavage for 8 weeks. *P*-value is calculated from one-way ANOVA. *$p < 0.05$.
