

Supplementary Figure 2

Supplementary Figure 2 PHRI correlation in patients in endoscopic remission (MES 0) Histological-endoscopic correlation demonstrated by heatmaps showing Spearman correlation coefficients between different histological and endoscopic scores in the **rectum (A)** and in the **sigmoid (B)** and between the endoscopic-histological scores and the specified clinical outcomes at 12 months in patients in endoscopic remission (MES = 0). (0.8-1.0: very strong correlation, 0.6-0.79: strong, 0.40-0.59: moderate, 0.2-0.39: weak) (* $p < 0.05$ as compared to PHRI with regard to the correlation strength in the same category of correlation analysis)
