Supplementary Figure 3

Correlation of histopathologic components in patients in endoscopic remission (MES 0)

Heatmaps showing the correlations of histopathologic components with PICaSSO endoscopic subscores and with the rates of 12-month adverse outcomes in patients in endoscopic remission (MES = 0). Biopsies from the rectum (A) and the sigmoid (B). (0.8-1.0: very strong correlation, 0.6-0.79: strong, 0.40-0.59: moderate, 0.2-0.39: weak) (*p < 0.05 as compared to neutrophils in the lamina propria, !p < 0.05 as compared to total neutrophils infiltration, and #p < 0.05 as compared to neutrophils in epithelium, with regard to the correlation strength in the same category of correlation analysis) (Neutrophils total: neutrophil infiltration in both lamina propria and epithelium)
