GRADE – strength of evidence	GRADE – strength of recommendation
High quality: Further research is very unlikely to change confidence of the estimate	*The trade-offs:* Taking into account the estimated size of the effect for main outcomes, the confidence limits around those estimates and the relative value placed on each outcome
Moderate quality: Further research is likely to have an impact on confidence in the estimate of effect and may change the estimate	*The quality of the evidence*
Low quality: Further research is very likely to have an important impact on confidence in the estimate of the effect and is likely to change the estimate	*Translation of the evidence into practice in a particular setting:* Taking into consideration important factors that could be expected to modify the size of expected effects
Very low quality: Any estimate of effect is uncertain	*Uncertainty about the baseline risk for the population of interest*
